

Time's up! Let's shape the Market for Flexibility together!

Utility? DSO? Aggregator? Prosumer? Storage Provider? Application Developer? Research Project?

We aim to collaborate with all companies, initiatives and projects who want to push the market for the commercial use of energy flexibility and are interested in exchanging experience and technology.

The benefits that we want to achieve together with you:

- o Creating the prerequisites to support high shares of distributed renewable energy generation
 - o Improving observability and manageability of distribution grids
 - o Increasing the grids available adaptation capacity and avoiding investments in transmission and distribution networks.
 - o Developing the commercial use of prosumer flexibility to balance local energy systems.
- o The University of Cyprus will use the campus as a microgrid to explore the provision of flexibility services to the DSO.
 - o In Germany the local utility SWW Wunsiedel aims to utilise prosumer flexibility as a next step towards a 100% self-supply with regional and green energy.
 - o In Switzerland the local utility ESR will use flexibility management to reduce peak loads on the distribution grid in areas where decentralized PV production is increasing.

Are you also interested in developing an energy system that works bottom-up?

How to fold:

Create fold lines diagonally, horizontally and vertically and open again.

Flip corners backwards to center.

Rotate 45 ° and fold corners to the front on the center.

Fold in the bed.

Push the fingers into the little tabs and unfold the game.

The project Generalized Operational FLEXibility for Integrating Renewables in the Distribution Grid (GOFLEX) has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 731232.
